Pacific Internet Subsidiary Launches BizVoice Solution In Hong Kong

Solution tailor-made for corporate customers, from SMEs to large enterprises

Singapore, 10 July 2002 - Pacific Internet (Nasdaq: PCNTF), a leading Internet Service Provider in Asia, today announced that its wholly owned subsidiary Pacific Supernet in Hong Kong, has launched a new solution named *BizVoice*, specially tailored to meet the communication needs of today's businesses.

With this solution, companies based in Hong Kong will be able to transmit enhanced voice, data and faxes via their existing data networks. Although they only pay a fixed flat rate, the solution allows unlimited communications between their regional offices located in Hong Kong and China. The newly launched service will initially offer connectivity between customers' regional offices located in Guangdong and Hong Kong, with plans to extend coverage to customers' regional offices in other parts of China.

Compared with conventional VoIP services currently available in the market, the *BizVoice* solution offers a unique cost-effective option for customers to deploy dedicated VoIP services via their existing enterprise networks to reduce long-distance telephony charges incurred when communicating with domestic or regional branch offices.

The solution is designed to be flexible and scalable to support a full range of connectivity modes from Broadband, Leased Line and IPLC, combined with IP-VPN to ensure secure voice and data exchange. *BizVoice* is suitable for businesses of all sizes, from Small-to-Medium Enterprises (SMEs) to large multi-national companies looking for a means to extend domestic and regional intra-company communications via existing corporate networks.

For companies looking to deploy such a solution regionally, it is generally advisable to use IPLC and IP VPN to ensure a secure and stable connection. With a dedicated IP bandwidth connection between China and Hong Kong, users can ride on the broadband network while enjoying the better quality of voice and data transmission. With QoS (Quality of service) management from Pacific Supernet, voice quality is further enhanced by prioritizing voice transmission over data.

3

"Dedicated bandwidth to China allows a more stable connection to transfer voice, data and faxes, thus making deployment of VoIP via broadband feasible. Additionally, this solution is easy to use and has a single-stage dialing similar to dialing an internal extension across the border." said Eddy Kuk, Managing Director, Pacific Supernet.

The package includes rental of a VoIP gateway and the entire equipment set-up is highly compatible with different models of routers and telephone systems that businesses are currently using. There is no additional up-front purchase of hardware and users can use existing equipment so as not to incur additional capital investment.

"We understand how important it is to have good communications with overseas trading partners and colleagues, and how costly it could be. The new *BizVoice Solution* provides a high quality and cost-effective option to users. As part of the Pacific Internet Group, spanning across six countries in Asia, Pacific Supernet is in a unique position to provide a comprehensive suite of access and application services to enhance intra-company communications across the region to companies in Hong Kong, enabling enterprises to deploy secure mission-critical applications and voice services", Kuk added.

Pacific Supernet offers 24x7 Technical Support for the *BizVoice* solution, backed by its team of experienced network engineers. Users are assured of a Service Level Agreement, as well as maintenance services available both in Hong Kong and China.

"The introduction of this *BizVoice* solution strengthens our leading position as an end-to-end Internet Services Provider in Hong Kong. Coupled with our existing connectivity services, users will greatly benefit from the vast potential of the Internet." Kuk concluded.
